Now in our 33rd year of successfully supplying quality uPVC and aluminium windows, doors and conservatories

Spring 2026

It's daffodil season, so that means Spring is finally on it's way. It's also the season that homeowners start to look at their houses in a different light (literally!) No longer wanting to hunker down behind closed doors and curtains, they begin to look at how they can brighten up their homes! This could be a slap of paint on their walls, or a refresh for their garden plants and furniture. We, however, will be hoping for those home renovations to include new windows and doors.

Our product range grew massively last year. With the introduction of the aluminium Heritage doors and the new IconiK bifold door system. A contemporary flush entrance door system in a variety of styles, that are structurally bonded to the sash. New panels and mouldings to elevate our uPVC entrance doors, which then became the main feature on the Regency door - available from our Period Door Collection.

This Spring, we are introducing further new products that we hope will help to increase your sales portfolio. Enabling you to offer your customer a full suite of products, from front to back of the home and inside too! See inside for more details.

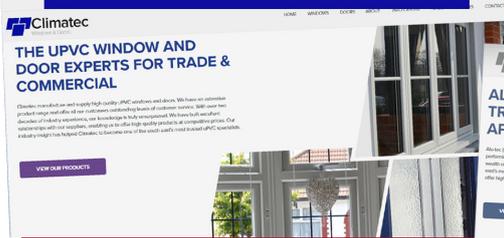

AN EXTRA HELPING HAND...

- Need information quickly?
- Want to know what colour door handles are available for your latest project?
- Need to email a brochure quickly to a potential customer?

Our websites are your first 'go to' point for all information regarding our uPVC and aluminium products. All up to date order forms are available so you can be sure you are ordering the best of the products you require.

RE-IMAGINING THE HERITAGE DOOR

We launched the Heritage door system from AluK last Spring, it was introduced as an external doorset only with a variety of configurations that could be coupled next to the AluK 58BW ST Heritage window system. Promoted as a the ideal product to replace older steel doors to create an impressive porch for the front of a home, or for a stunning back doorset. This system has become very popular over the last year.

However, our customers didn't necessarily want these doors just on the outside of the house, they wanted them inside the home too. Double doors and single doors with the horizontal bars are the perfect solution for separating rooms but allowing the light to flow throughout the house.

So whether it's an industrial steel look for the outside or a contemporary door for inside the home, speak to the Alu-tec team about the AluK Heritage window and door system, or download the brochure from the Alu-tec website.

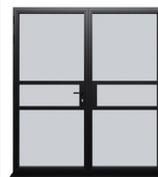

DOOR CONFIGURATIONS

SINGLE DOOR
OPEN IN & OPEN OUT

SINGLE / DOUBLE DOOR
+ SIDE LIGHTS

DOUBLE DOOR
OPEN IN & OPEN OUT

SINGLE / DOUBLE DOOR
+ FAN LIGHTS

Taking the Heritage door system one step further, the Alu-tec fabrication team have also used the profile to create this interior door design.

The slim door frame has been adapted for internal use, with a roller latch and pull handle fitted for the open and close operation. The 25mm astragal bar design has added the extra wow factor to this door, with the internal side powder coated to match the handle and hinge colour.

The different glass and bar options for these doors is huge, and will totally transform the inside of your home or office environment.

TIMBER ALTERNATIVE ENTRANCE DOORS

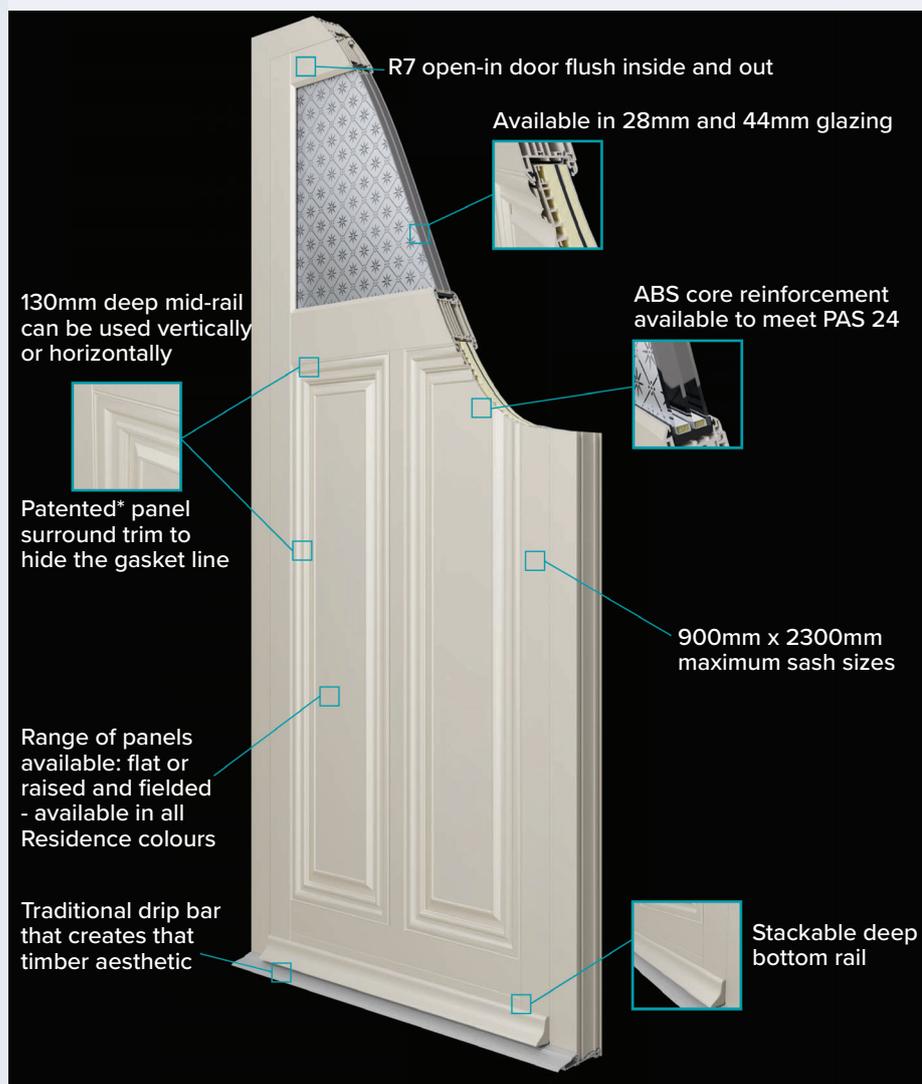

The Residence Collection have unveiled their new timber alternative, entrance door collection, and Climatec Windows are looking forward to adding these to our product portfolio, sitting nicely alongside our Period Door Collection.

The open-in door sash is chamfered to perfectly suite with our flush window sash, as well as our open-out door sash. The door also features a new deep bottom rail, mid-rail and patented* panel surround trim, as well as a full range of matching foiled flat and raised and fielded panels. A traditional drip bar fitted to the bottom of the door completes the authentic timber look, replicating the historical design found at the base of older wooden doors.

Climatec will begin offering the door sashes with either ETL or standard welds. The RD Residence Collection Entrance Door brochure is available on our website with an order form to follow in due course.

FEATURES & BENEFITS

New Open-In Sash

Chamfered to perfectly suite our open out door sash and window sash

New Deep Mid-Rail

Horizontal or vertical it provides the space for a letterplate or knocker

New Traditional Drip Bar

Traditional drip bar that creates that timber aesthetic

Panel Surround Trim*

Hides the gasket line and offers a moulded timber aesthetic

Range of Colours

11+ colours available to choose from

Large Sash Sizes

Create a door of any size with sash sizes up to 900mm x 2300mm

New Deep Bottom Rail

Stack the new deep bottom rail so it can match a traditional timber door style.

New clip-on Georgian Bar

Our Georgian bar features an aluminium clip bar system for that perfect alignment

*Patent Pending GB - GB2315791.0, Patent Pending IRE - 2023/0432

28MM TRIPLE GLAZED UNITS NOW AVAILABLE

Following a recent meeting between Climatec Product Manager John Banks and glass supplier Clayton Glass, we can now inform you that we will be offering their recently launched 'skinny' triple-glazed sealed unit, the Triple28™. This new triple-glazed sealed unit has been engineered to deliver triple-glazing performance within a standard 28mm glazing profile which will mean that our customers can upgrade from double glazing to triple glazing without changing window frames or glazing beads.

Gone is the need for deeper profiles and heavier units. The Triple28™ incorporates an advanced construction that features a 100% glass monolithic core, meaning all three panes are fully recyclable, while enabling Clayton Glass to achieve triple-glazing performance in a slimmer and lighter format than conventional triple-glazed units. The new method uses 2 x 4mm 1.0 soft coat panes and 1 x 1mm float as opposed to the usual 3 x 4mm panes. This gives a centre pane value of 0.8. When compared to standard 28mm double glazed units this delivers up to 90% greater thermal efficiency; another selling point for homeowners. This unit will weigh 22.5kg m², only marginally heavier than a standard double glazed unit. So the opportunity to upgrade a window by changing the unit only, and not the whole window, becomes a reality. A laminate option is also available offering improved acoustic performance and enhanced security.

INVISI DOOR HINGES FOR ALU-TEC!

Great news for our aluminium customers! Following the news of Climatec being the first fabricator to offer the new 'invisible' door hinge for the REHAU Total70 residential doors, we have now had successful trials on our aluminum single and double doorsets too.

The InvisiHinge has been designed specifically to create a seamless and invisible integration of frame and sash. The InvisiHinge is a black hinge that is hidden from sight when the door is closed. Flush fit into the outerframe rebate for that clean look on the outside of the door. 2D adjustability is available post installation, and a built-in restrictor controls the door movement to 90 degrees. You can find further information on these hinges on the Door Hinge specification sheet, in the Hardware section of our website's Information Centre.

NEW SELF LOCKING DOOR BOLT FROM ULTION

Climatec have a new slam shut lock for their residential doors. The Ultion Bolt has been trialled for the last 9 months and will now be introduced on our REHAU residential doors, including our popular Period Doors.

The self locking door bolt has all the performance and security properties found with all Ultion products. Three equally spaced latch bolts engage as soon as the door has closed, eliminating any need for a lift lever operation. And even if the door isn't 100% closed the independently firing bolts mean the key will secure it. This also prevents the door bowing too.

ULTION | BOLT

This lock will be available with immediate effect if required, however the current MACO A-TS lock will still be used as standard until the current stock have been depleted.

Further details can be found on the hardware specs in our Information Centre of the website.

COMING SOON!

ETL WELDS FOR 62MM & 72MM OUTERFRAMES

Currently being trialled and tested, our REHAU Rio windows and doors will soon be available with our ETL welds on the REHAU 62mm and 72mm outerframe.

This mechanical look for the external face of the sash and frame is currently only available for the REHAU 52mm framed products. So by expanding the offering to the intermediate and large sized outerframes, will give our customer's more flexibility to sell a Rio door with the authentic mechanical join appearance of a timber door.

When all trials have been exhausted and our software has been updated, further information will be available by mailout.
